MYRIAD360

BRIEF

STAY ONE STEP AHEAD OF THE EVOLVING THREAT LANDSCAPE

Maintaining a secure perimeter and overall IT environment in today's rapidly evolving threat landscape is critical to ensuring your business can maintain its competitive advantage. A Myriad Firewall Health Check will help your organization evaluate the current firewall implementation and maximize the ROI of your Next-Generation Firewall (NGFW).

The Power of a Myriad Firewall Health Check

The Myriad Firewall Health Check will provide insight into the operational state of an organization's firewall environment by uncovering configuration and implementation errors and inefficiencies.

A Myriad Firewall Health Check:

· Ensures your firewall model is appropriately sized to meet your organization's present and future needs

· Reviews traffic and system logs

· Evaluates your firewall's security policies and licensing strategies

· Analyzes metric parameters including sessions, actions, and resources

· Compares the present implementation of firewall features to industry best practices

· Creates a snapshot of end-point activity, outlining potential and imminent security threats

· Produces a roadmap outlining how to more effectively utilize your firewall beyond traditional port and protocol implementation

At the conclusion of your Myriad Firewall Health Check, you'll receive a comprehensive report outlining all security suggestions sorted by priority.

How is a Myriad Firewall Health Check Conducted?

The Health Check procedure can be conducted in two ways, Prospective or Retrospective.

Prospective Health Check: Logging begins at Health Check start date and runs for 30, 60, or 90 days, with data from the entirety of the chosen duration utilized in the final report.

Retrospective Health Check: Logging is compiled retroactively from Health Check start date back to 30, 60, or 90 days in the past. These Health Checks are shorter in duration and are contingent upon the quality and availability of historical data.

At the end of the Health Check, your organization will be presented with a comprehensive final report containing all health check findings along with strategic recommendations for improving the efficacy of your NGFW and strengthening your security posture.

Outcomes & Deliverables

· Health Check kick-off call:

  · Pre-check and interview

  · Health check data collection scheduling

· A comprehensive report that goes over the following:

  · An audit of configurations against industry best practices

  · Log file and activity review to identify any security threats both inside and outside the network

  · A working roadmap to get the network to a security equilibrium for either compliance or risk assessment needs

· Review session to go over recommendations

Who performs these health checks?

Myriad Firewall Health Checks are performed by our experienced team of Cisco, Juniper, Fortinet, and Palo Alto Networks certified Professional Services Engineers and managed by our PMP-certified project management team.

Why Myriad?

Myriad's extensive experience configuring, migrating, and installing firewalls across a wide range of enterprises and industries informs our custom Health Check services and enables us to provide expert insights and recommendations into the NGFW configurations and strategies that will best serve your organization's security goals. Protect your business with a Myriad Firewall Health Check today.
