

**BRIEF**

# MYRIAD CYBERSECURITY PROFILE

Documenting current security infrastructure takes precious time. But addressing a breach costs infinitely more.

Between daily tasks to keep the lights on, keeping current with new requests, and being asked to do more with less, IT resources are stretched thin industry-wide. It's no wonder why documentation initiatives get pushed to the bottom of their priority list. Creating a comprehensive cybersecurity profile is an investment of time many IT teams simply don't have.

An in-depth and up-to-date cybersecurity profile isn't just nice to have. The future of your organization depends on it.

It's vital to understand your current state in order to take the right steps to keep your security posture ahead of the rapidly evolving threat landscape. With a complete bird's-eye view of your current setup, you'll make more effective decisions better in line with your security goals. A cybersecurity profile also helps you:

- Avoid costly mistakes
- Reduce operational complexity
- Obtain an accurate evaluation of your risk profile and security maturity
- Eliminate technical debt, policy violations, shelfware, redundant systems and more
- Identify opportunities for automation
- Understand how the newest technologies and products can be integrated to your environment

## We'll do the heavy lifting necessary to keep your organization safe.

Myriad's experienced team of security experts with over 100 in-house advanced certifications will:

- Review all your existing documentation
- Work hand-in-hand with your staff, conducting interviews with key stakeholders
- Qualitatively & quantitatively evaluate the devices, applications, and services currently in use

Myriad will bring together the resources and expertise required to thoroughly evaluate the current state of your IT security infrastructure so you don't have to. At the conclusion of the profile creation process, you'll get a full picture of where your posture currently stands, all in one place. We'll provide a:

- **Custom manifest** – A complete list of your security controls (hardware, software, and/or services). This includes a comprehensive rundown of the vendors, products and specific versions present in your environment.
- **Detailed illustration** – A visual depiction of your security controls, business intent and asset protection.

Lack of visibility into your current infrastructure leaves you vulnerable. We'll capture and communicate a detailed understanding of where you are, what you have, and how you're using it so you can better prepare for the future.
