

**BRIEF**

# OUTAGES DON'T HAPPEN ON YOUR TERMS

Keeping your business online is critical in today's technology-first economy. A Myriad Disaster Recovery Readiness Assessment (DRRA) evaluates your business's network infrastructure to ensure continuous operation no matter what challenges come your way.

## A Second Set of Eyes Can Make A World of Difference

The power behind a DRRA lies in our attention to detail. Our experienced team of Cisco, Juniper, Fortinet, and Palo Alto Networks certified Professional Engineers will analyze your environment from a design and configuration perspective, reporting on our findings with a concise analysis and remediation action plan. All the while, our PMP certified Project Managers will ensure your team is updated every step of the way.

## A Disaster Recovery Readiness Assessment:

- Analyzes critical edge routing devices for appropriate protocol configurations and routing single points of failure
- Reviews edge switching devices for loop avoidance and appropriate trunking parameters
- Reviews transit circuitry information for capacity and physical redundancy
- Ensures that businesses are compliant with strict industry standards

## How Is A DRRA Conducted?

In order for Myriad to analyze your infrastructure, we need to get to know your environment and your business.

- 1. Kick-Off Meeting:** The engagement begins with an initial information session between your business and a Myriad DRRA team. We'll walk through your infrastructure and the operational theory behind your redundant design.
- 2. Comprehensive Hand-Off:** We'll review all relevant documentation: high and low-level topologies, configuration files, SLAs, and even the kitchen sink.
- 3. Analysis:** We'll take this information back to our New York HQ and review it with a fine-toothed comb. From protocol configuration to static routes and spanning-tree versions.
- 4. Follow-Up Visit:** Once a first impression has been made, the Myriad DRRA team will make a return visit to answer outstanding questions your team may have regarding your infrastructure.

- 5. Report and Review:** Myriad takes our findings and wraps them up in a thorough and concise report. We'll come back one more time to review our findings and discuss further recommendations.

Myriad's winning combination of impartiality and extensive industry experience provides assurance that critical infrastructure issues are found and a path to remediation is well defined. Myriad can further assist in rectifying issues found in a hands-on or consultancy capacity.

Don't leave business operations to chance. Reach out to Myriad to find out more.
