

BRIEF

MYRIAD CLOUD HEALTHCHECK

Are you thinking of migrating your servers and workloads to the cloud? Are you looking to cut costs in your existing cloud service deployments? Myriad Supply's Cloud Readiness Assessment and Healthcheck can help.

- Our AWS and Microsoft certified engineers work with you to analyze the servers and VM's to be assessed.
- Myriad runs a 2-week long assessment on those nodes, working with the you to install and deploy a minimal agent that monitors and analyzes the workload running on those nodes.
- Myriad provides you with a full analysis of your existing on-prem or cloud infrastructure and workloads, and provides best practice approaches to optimizing performance, security, and cost for those workloads on the cloud.

Our assessment can cover Azure, AWS, or both, and provides a series of benefits depending on your current status.

For clients looking to move existing on-prem or colo workloads to the public cloud:

Myriad's analysis provides best practices information for determining the best options for instance or VM sizes, storage, and performance to properly run workloads on the public cloud in the most efficient and cost-effective way.

Myriad provides a full cost comparison between a standard lift-and-shift migration that duplicates existing on-prem resources on the cloud, and a workload-optimized migration that takes advantage of the cloud's flexibility and efficiency. Often clients can see up to a 30-40% monthly cost reduction by using a workload-optimized approach, and Myriad has the knowledge and technical expertise to perform that kind of migration.

The analysis also provides information on which workloads are connected on different servers or VM, allowing us to provide a best-practices compliant migration plan that takes into account service and network dependencies. This lets Myriad create migration plans and services that reduce risk, uncertainty, and mistakes, which leads to less downtime during migration and lower costs for you.

For clients that have existing workloads in the cloud:

Myriad's analysis provides a view into how existing workloads are running on your private cloud, and how well architected they are.

It also shows where there are opportunities to optimize instance sizes and services to reduce costs while maintaining the same levels of performance on your cloud applications.

Using the AWS Well-Architected framework with the information gathered from the assessment, Myriad can provide clients with a full best-practices based report on optimizing, securing, and managing your cloud resources.

For any kind of cloud deployment, whether it's a migration or an existing cloud workload, Myriad's Cloud Readiness Assessments and Healthchecks are your first step towards taking full advantage of the cloud's benefits in a cost-effective and efficient way. Myriad Supply's full team of certified network, systems, and cloud engineers are ready to help your company work confidently on the cloud.

Feel free to reach out to your Account Executive and we'll be glad to get on the phone and discuss the benefits of a Cloud Assessment and the get started on making your cloud plans a reality!
