BUILDING A CLOUD-INTEGRATED NETWORK

The network is the most fundamental layer of any technology infrastructure. And the increased demands companies place on their networks make it more challenging than ever to ensure consistent performance.

Getting More from Your Network

Imagine a single network that connects all relevant applications and users, no matter where they are in the world—one with full visibility of all endpoints, offering flexibility and control over how they connect. This is a Cloud-Integrated Network.

A Cloud-Integrated Network combines the principles of software-defined networking (SDN), Intent Based Networking (IBN) and the capabilities of Network Function Virtualization (NFV) to add visibility and intelligent control in modernizing your data center.

The Four Domains of a Cloud-Integrated Network

With more than 15 years' experience in technology infrastructure, Myriad360 has established a practice of partnering with our clients to build successful Cloud-Integrated Networks based on four key domains:

1 **Disaggregation and virtualization:**
Decoupling services and functions from specific hardware delivers dramatic cost benefits to your organization, as well as greatly increases your agility.

2 **Automation and orchestration:**
By leveraging software as a force multiplier, you enable your company to significantly reduce errors, increase your output and operate more efficiently.

3 **Devices and connectivity:**

Whether your network devices are physical or virtual, disaggregated or integrated, or even containerized, we can assist with design, procurement, testing, configuration and installation.

4 **Telemetry and analytics:**

We go beyond Simple Network Management Protocol (SNMP) to embrace a truly data-centric approach. This allows us to effectively optimize your network, collect relevant information, and build visibility around your network and application performance.

Myriad360: Your Partner for Unlocking Your Company's Full Potential

As your partner, we'll guide you on your journey to increasing the scale, agility, efficiency and performance of your technology infrastructure.

How do we do it? We work with you to:

- Assess your current infrastructure and create a tailored project roadmap
- Design your ideal Cloud-Integrated Network architecture
- Procure all the devices and tools your company needs at the right price
- Handle logistics and project management for any deployment anywhere in the world
- Rack, cable and configure gear anywhere in the world
- Implement a custom automation framework or an off-the-shelf SDN platform
- Deploy telemetry and analytics solutions to provide the visibility you need

Myriad360 combines strategic planning with flawless execution in implementing the right technology solutions for your organization.
